COVID-19 Vaccine Talk outline

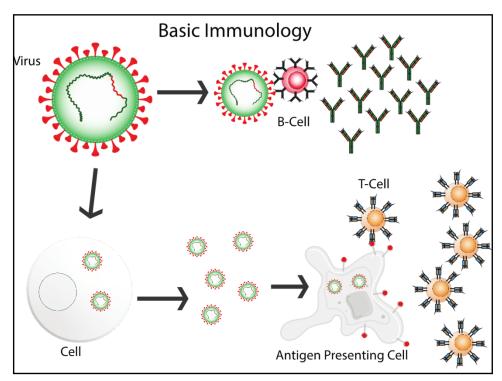

- 1. Vaccines Study Phases
- 2. Vaccine Types
- 3. Participating in a Vaccine Study
- 4. Decisions about Vaccines with limited Data

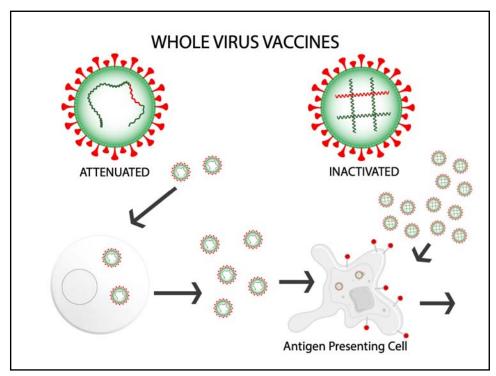

Vaccines Study Phases

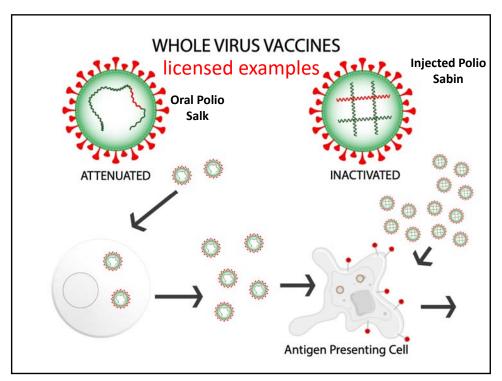

- Phase 1 Safety Trials are small safety trials with some confirmation that the vaccine stimulates the immune system.
- Phase 2 Expanded Trials move this up to hundreds of people and a broader age and again look at safety and immune stimulation.
- Phase 3 Efficacy Trials are placebo-controlled trials look at efficacy and less common sideeffects.

Participating in a Vaccine Study

- For Moderna one can go to https://www.modernatx.com
- For the Pfizer/BioNTech one can go to https://www.covidvaccinestudy.com/
- For the AstraZeneca/Oxford study go to https://www.c19vaccinestudy.com
- Johnson and Johnson https://www.unitedinresearch.com
- Novavax -starting soon
- To sign up to be alerted for a vaccine trial https://www.coronaviruspreventionnetwork.org

Decisions about Vaccines with limited Data

- Minor adverse effects
- Serious Adverse Effects
 - Death
 - Guillain-Barré syndrome (GBS)
 - Rapid onset of ascending paralysis over hours to weeks with about 15% of people requiring mechanical ventilation.
 - This is thought to be cause by auto-reactive antibodies triggered by natural infections or vaccination.
 - Most people fully recover over weeks to years but 30% never fully recover and about 7-8% die.
 - Transverse Myelitis
 - Encephalitis
 - Antibody dependent enhancement (ADE)

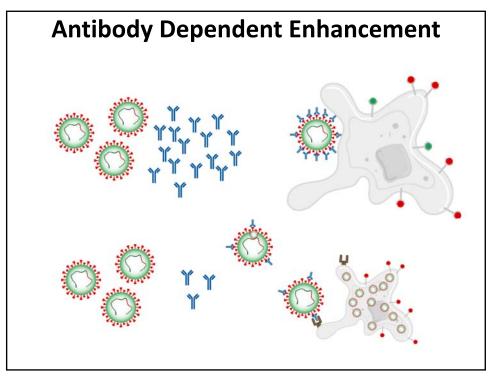

17

Guillain-Barré syndrome (GBS)

- Rapid onset of ascending paralysis over hours to weeks with about 15% of people requiring mechanical ventilation.
- This is thought to be cause by auto-reactive antibodies triggered by natural infections or vaccination.
- Most people fully recover over weeks to years but 30% never fully recover and about 7-8% die.

Transverse Myelitis

- Rapid onset of weakness, sensory issues and bowel and bladder dysfunction.
- This is thought to be cause by auto-reactive antibodies triggered by natural infections or vaccination that target the myelin (oligodendrocytes and schwann cells) in the spinal cord.
- Most people have at least a partial recovery but this can take years.

Vaccines and Emergency Use Authorization

- Project BioShield Act of 2004
 https://www.congress.gov/bill/108th-congress/senate-bill/15 2004.
- Pandemic and All-Hazards Preparedness Reauthorization Act of 2013

https://www.congress.gov/bill/113th-congress/house-bill/307

• Under these regulations, if the known or potential benefits are thought to outweigh the known and potential risks, emergency use can be granted.
