

**Optum** Health Education™

# Degenerative Joint Disease: Evidence-based Approaches to Care

Chad Mather III, MD, MBA  
Medical Director, Optum Specialty Practices  
Medical Director, Specialist Engagement, Optimal Care  
Associate Professor, Department of Orthopaedic Surgery, Duke University Medical Center

# Outline

- 1 **Current Landscape of DJD care**
- 2 **Discuss the current evidence base for DJD**
- 3 **Overview of the unique challenges of delivering evidence-based care for DJD**
- 4 **Overview of Innovative Delivery Models**

## DJD Care today

Who is the DJD patient?

Chronic disease

2/3 have psychologic distress

Degenerative Joint Disease  
costly, disabling, prevalent, growing

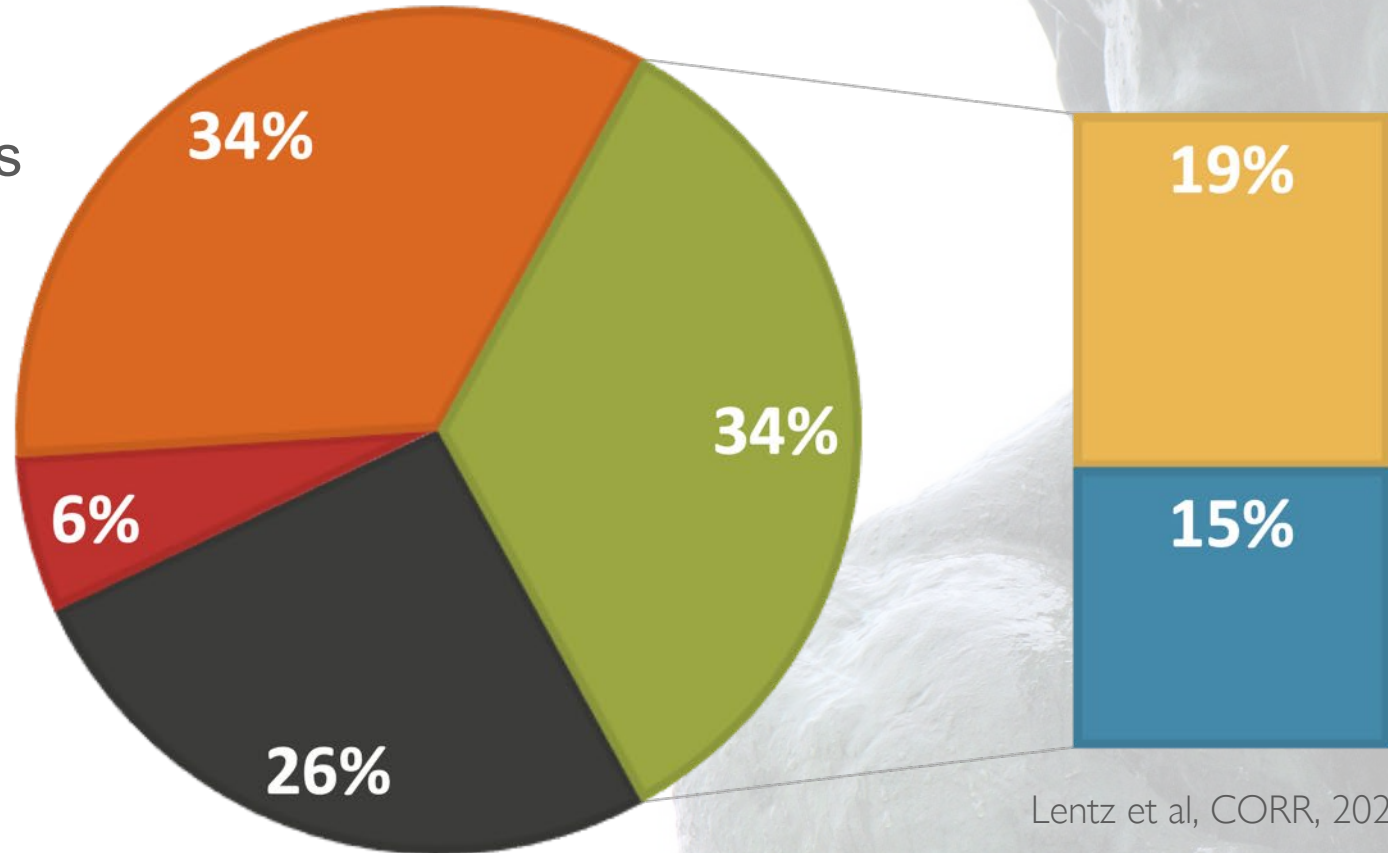

# Psychological distress is common and heterogeneous

■ low distress ■ negative mood ■ high overall distress ■ poor coping & self efficacy ■ poor self-efficacy

## Psychological Distress Phenotypes

1. High distress
2. Low distress distress
3. **Fear avoidance (catastrophizing)**
4. Negative pain coping
5. Isolated negative mood

Lentz et al, CORR, 2020

# DJD Care Today

Who is the DJD patient?

Chronic disease  
2/3 have psychological distress

Who cares for them?

MSK experts may not have the skills or alignment for chronic disease management

How are they treated?

20% have a joint replacement  
Disproportionate focus on surgery

Degenerative Joint Disease  
costly, disabling, prevalent, growing

Evidence-based care?

# Many DJD Guidelines

## GUIDELINES

### Care and management of osteoarthritis in adults: summary of NICE guidance

Philip G Conaghan,<sup>1</sup> John Dickson,<sup>2</sup> Robert L Grant,<sup>3</sup> on behalf of the Guideline Development Group

## THE AMERICAN ACADEMY OF ORTHOPAEDIC SURGEONS EVIDENCE-BASED GUIDELINE ON

### Treatment of Osteoarthritis of the Knee, 2nd Edition

David S. Jevsevar, MD, MBA  
Gregory Alexander Brown, MD, PhD  
Dina L. Jones, PT, PhD  
Elizabeth G. Matzkin, MD  
Paul A. Manner, MD, FRCSC  
Pekka Mooar, MD  
John T. Schousboe, MD, PhD  
Steven Stovitz, MD

James O. Sanders, MD  
Kevin J. Bozic, MD, MBA  
Michael J. Goldberg, MD  
William Robert Martin, III, MD  
Deborah S. Cummins, PhD  
Patrick Donnelly, MA  
Anne Woznica, MLIS  
Leeaht Gross, MPH

## Osteoarthritis and Cartilage

### OARSI guidelines for the non-surgical management of knee osteoarthritis

T.E. McAlindon †\*, R.R. Bannuru †, M.C. Sullivan †, N.K. Arden †, F. Berenbaum § ||, S.M. Bierma-Zeinstra ¶, G.A. Hawker #, Y. Henrotin † † †, D.J. Hunter §§, H. Kawaguchi ||||, K. Kwok ¶¶, S. Lohmander ##, F. Rannou † † †, E.M. Roos † † †, M. Underwood §§§

### *Guideline for the management of knee and hip osteoarthritis*

Second edition

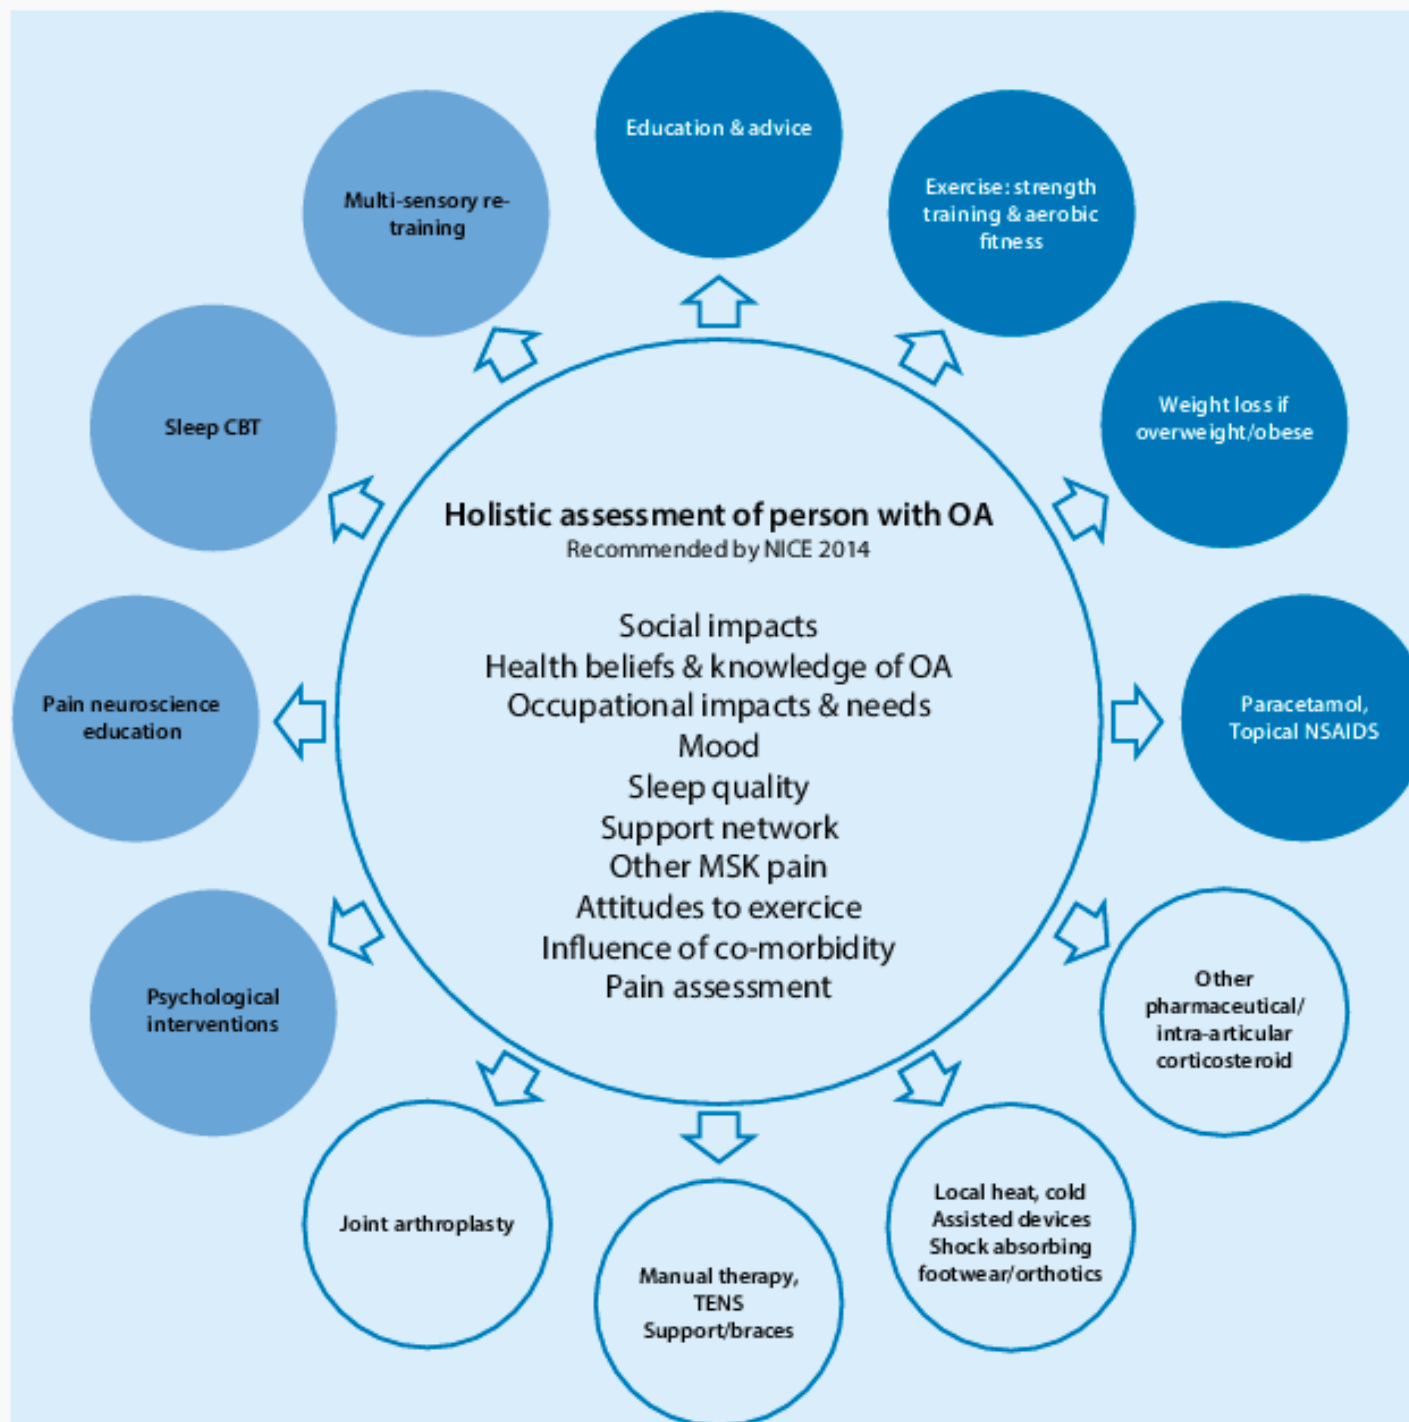

# AAOS Clinical Practice Guidelines

## Hip OA

-  strong evidence
  - For PT
  - For steroid injections
  - For non-narcotic management
  - Against HA
-  moderate evidence
  - Worst outcomes with mental health disorders

## Knee OA

-  strong evidence
  - For rehabilitation, education & wellness activity
  - For NSAIDS
  - Against HA
  - Against Arthroscopy
-  moderate evidence
  - For weight loss

# Too little of recommended care is delivered

## Limited codes for evidence-based treatments

### Utilization from Knee OA Diagnosis to TKA

	Percentage of Patients	Total Cost	Percentage of Total Knee OA Cost
<b>Treatment</b>			
PT	16.7%	\$1,511,448	6.9%
Knee Brace	6.5%	\$434,096	2.0%
NSAID	23.1%	\$232,394	1.1%
Tramadol	9.4%	\$18,184	0.1%
Opioid	20.9%	\$128,784	0.6%
CS Injection	58.6%	\$2,006,268	9.1%
HA Injection	26.2%	\$5,048,392	23.0%
Arthroscopic Debridement	0.4%	\$97,066	0.4%
<b>Imaging</b>			
XR	94.9%	\$1,897,371	8.6%
CT	3.3%	\$158,131	0.7%
MRI	18.3%	\$1,687,316	7.7%
<b>Evaluation and Management</b>			
E/M	98.1%	\$6,028,927	27.4%
<b>Total</b>		<b>\$19,248,377</b>	<b>87.6%</b>

## DJD Care today

# Why?

Who is the DJD patient?

Chronic disease  
2/3 have psychologic distress

Degenerative Joint Disease  
costly, disabling, prevalent, growing

Evidence-based care?

Limited alignment with guidelines  
30% of spend is low value  
Void of high value non-op care

Who cares for them?

80% by orthopedic surgeons  
Chronic disease cared for by  
procedural specialists

Equity?

10% of patients account for half of  
non-operative spend

How are they treated?

20% have a joint replacement  
Disproportionate focus on  
surgery

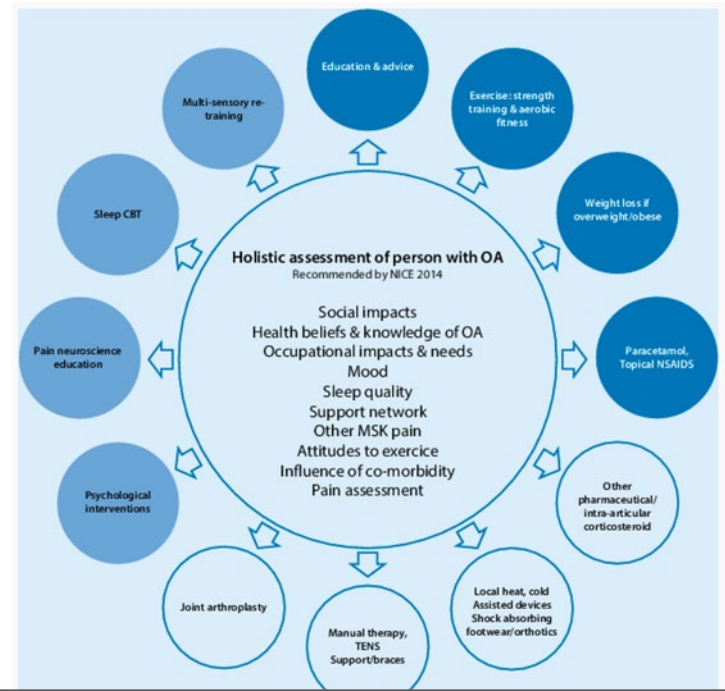

Appropriateness?

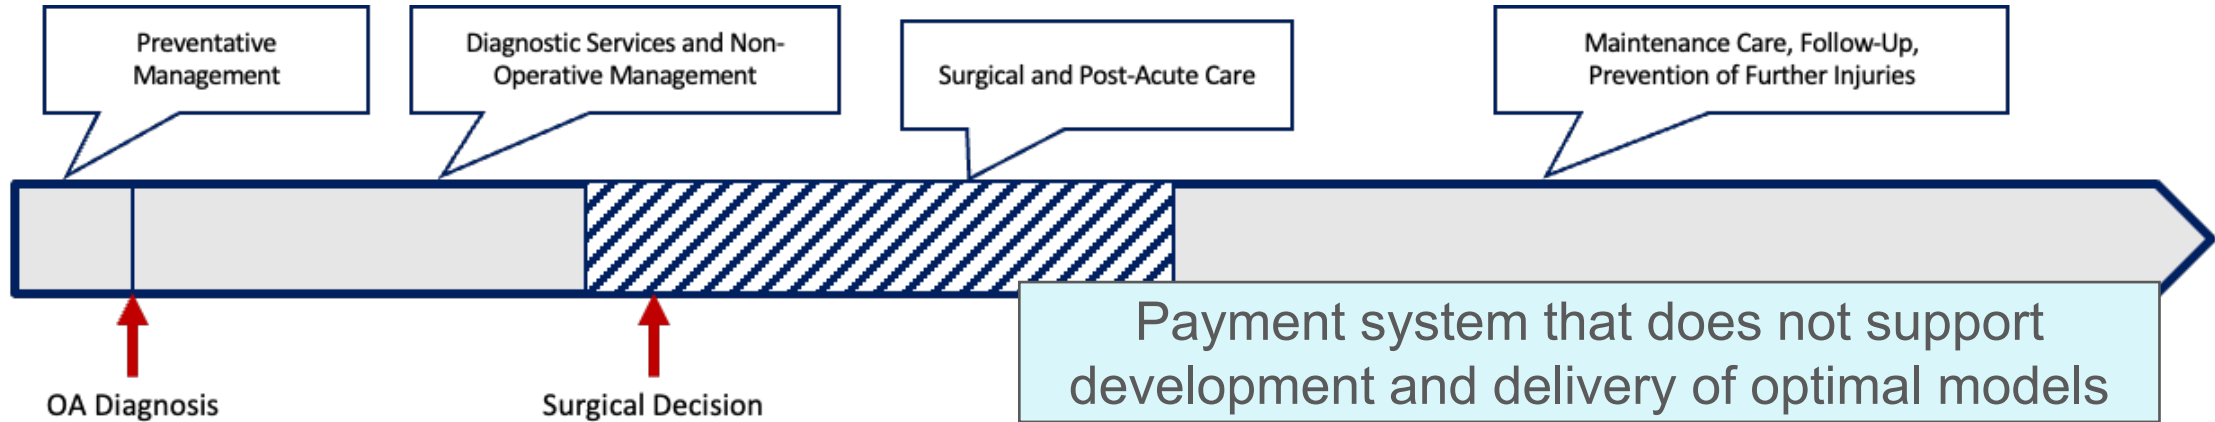

34% of TKA are not appropriate  
44% are clearly appropriate

# 3 major influences

## Biomedical view of disease

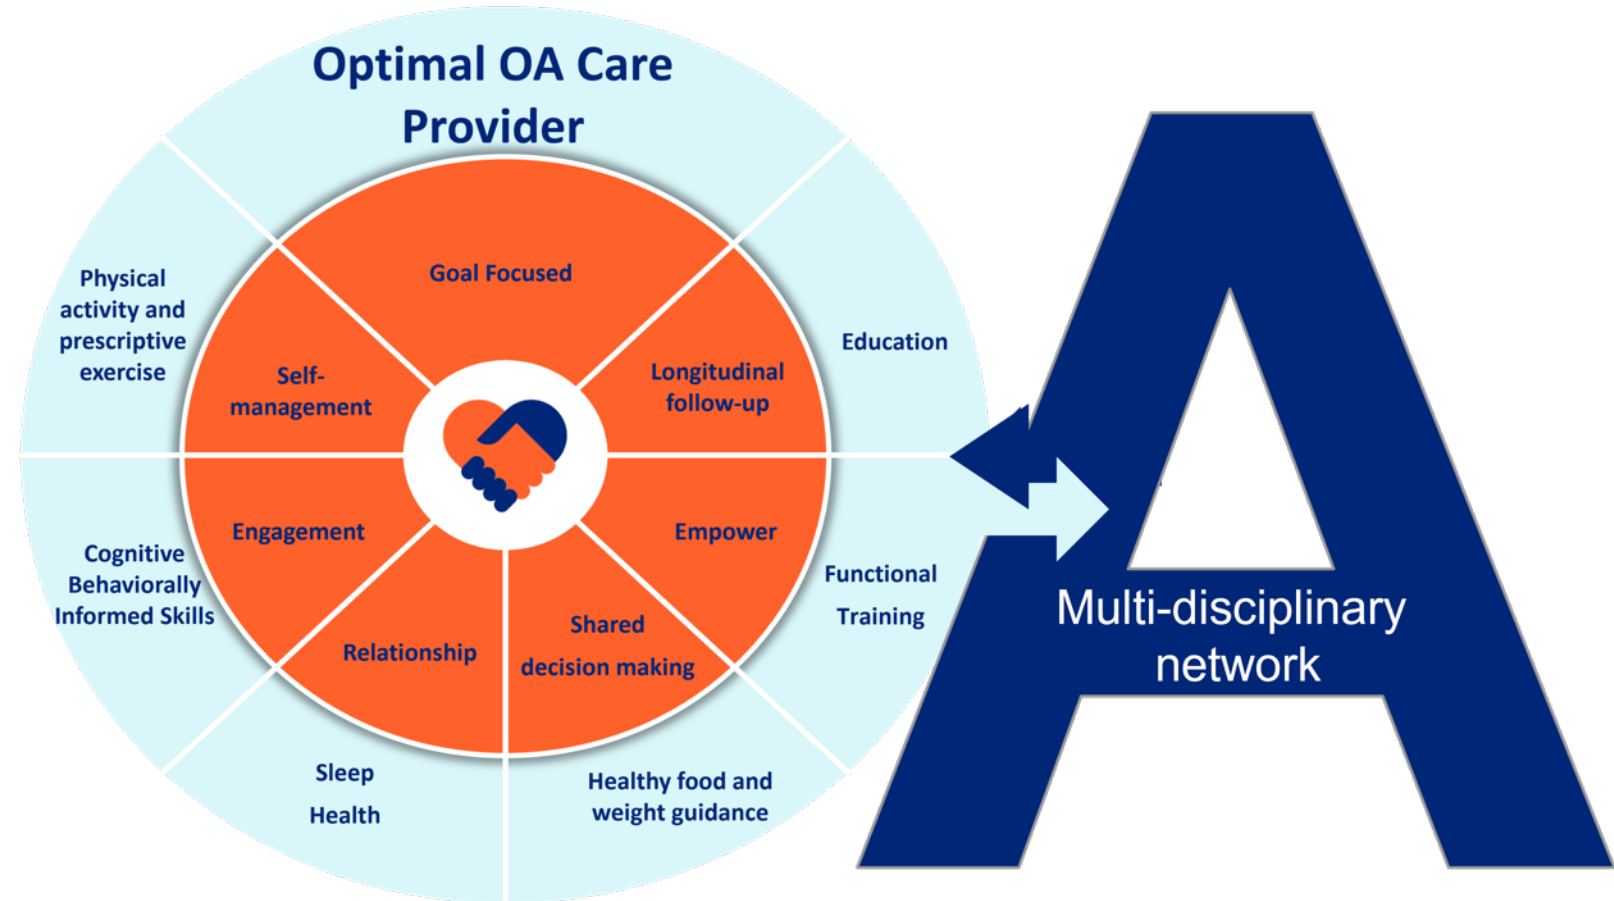

## Complexity of delivering nonop care

# Optimal OA Care is our solution to this problem

- **Biopsychosocial approach**
- Condition-based care provided by a **multi-disciplinary provider**
- Collaborative care
- Measurement
- Guideline adherent care
- Infrastructure and technology
- Building culture and community
- **Self-management**

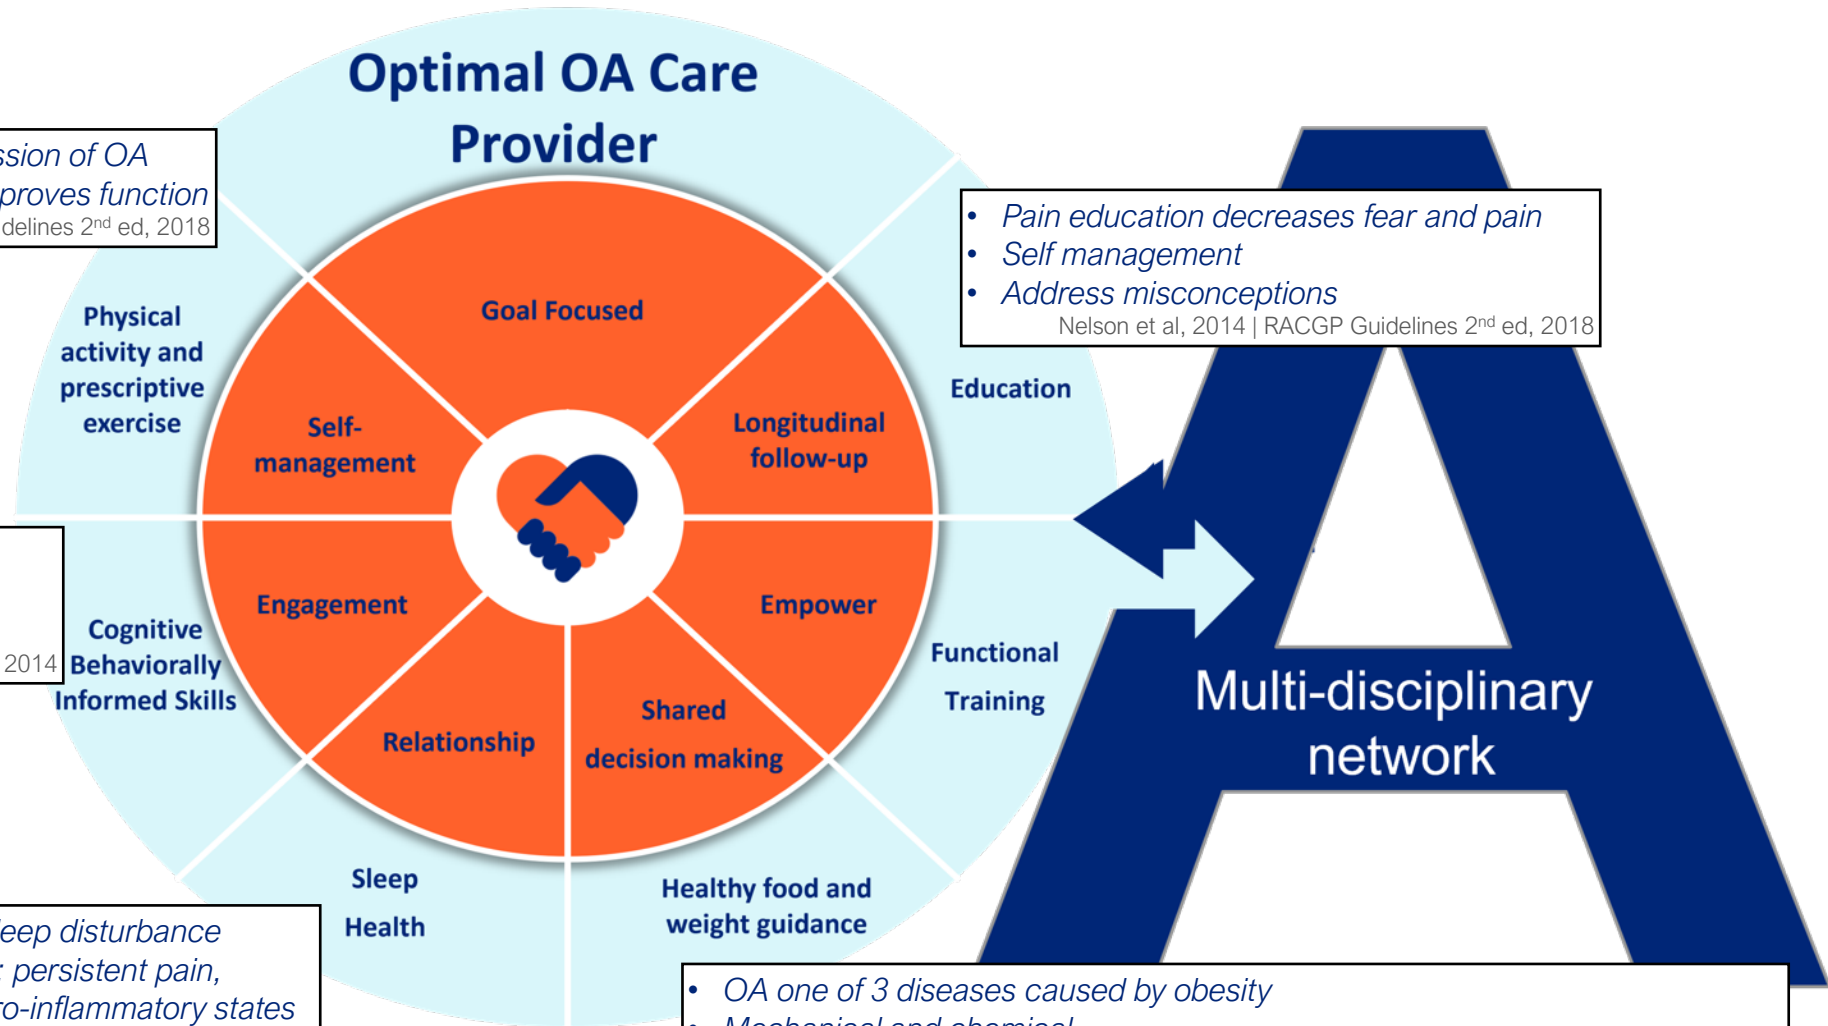

# Diving deeper into the evidence

- *Sedentary lifestyle linked to develop and progression of OA*
  - *Physical activity & exercise decreases pain & improves function*
- Mobarshii and Batt, 2017 | NICE Guidelines, 2014 | RACGP Guidelines 2<sup>nd</sup> ed, 2018

- *Decreases pain, increases self efficacy*
  - *More effective when combined*
  - *PTs can be trained to deliver CBT*
- Hunt et al, 2013 | Ismail et al, 2018 | Nielson et al 2014

- *>50% with OA exhibit sleep disturbance*
  - *Impaired sleep linked to: persistent pain, depression, disability, pro-inflammatory states*
- Mills et al, 2018

- *OA one of 3 diseases caused by obesity*
  - *Mechanical and chemical*
  - *5-10% weight loss can significantly impact pain*
  - *Anti-inflammatory diets can decrease biomarkers of cartilage degradation*
- Mora et al, 2018 | Morales-Ivorra et al 2018

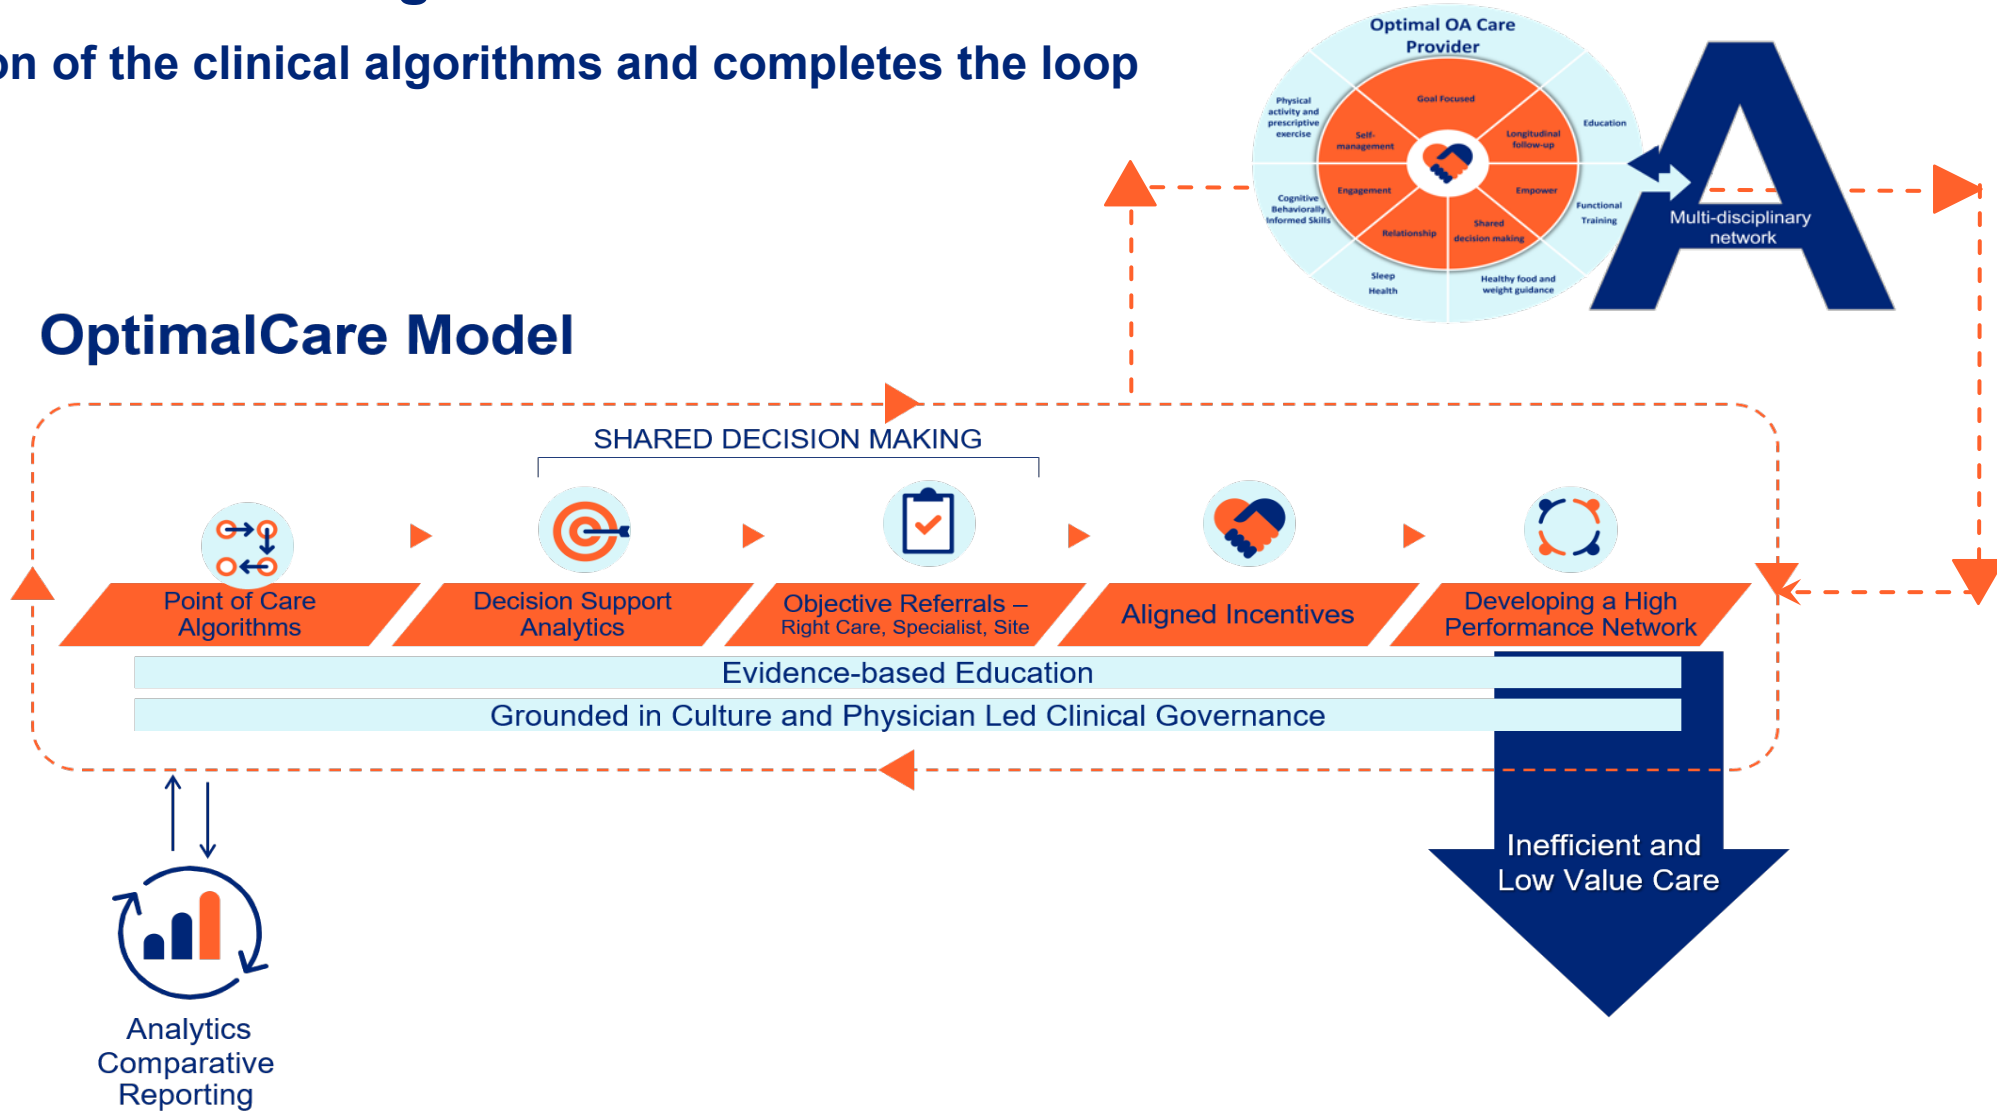

- *Pain education decreases fear and pain*
  - *Self management*
  - *Address misconceptions*
- Nelson et al, 2014 | RACGP Guidelines 2<sup>nd</sup> ed, 2018

# Optimal Care OA Program

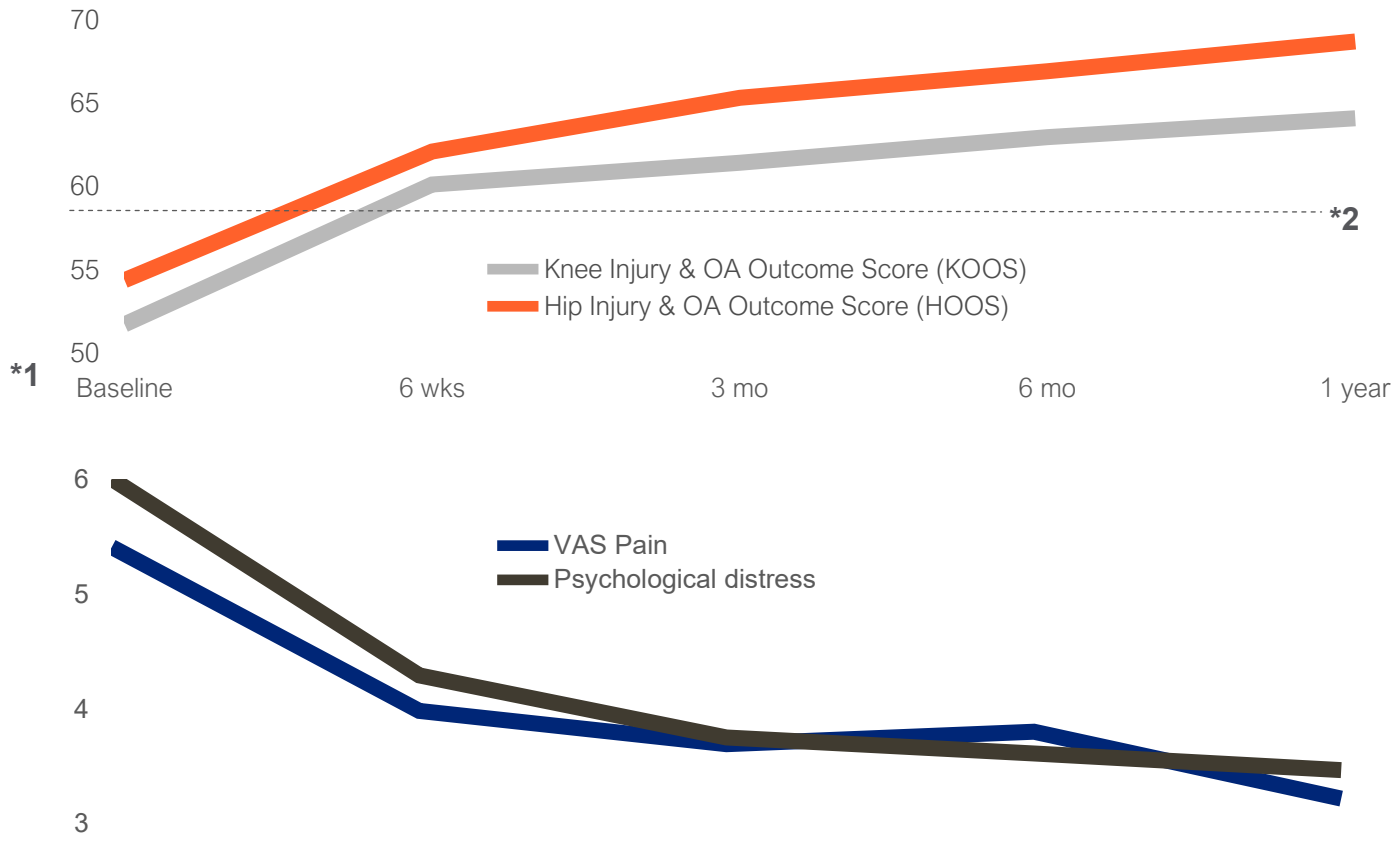

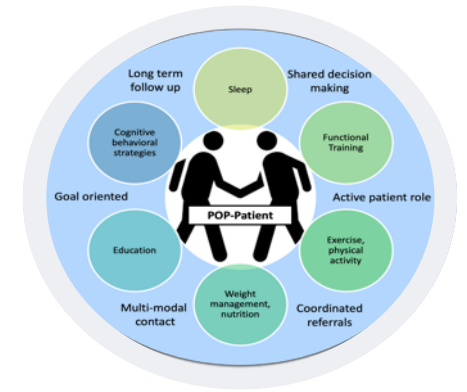

Extension of the clinical algorithms and completes the loop

## OptimalCare Model

# Optimal OA Care is inspired by the Duke Joint Health Program

1. Avg preoperative TJA score

2. 58 threshold above where patients are too functional to benefit significantly from TJA

© 2022 Optum Health Education. All rights reserved

**2/3**

Proportion of patients have functional outcomes scores above a threshold where joint replacement is unlikely to confer clinical benefit (72% knee, 67% hip)

74% of knee patients meet the minimal clinically important difference, 57% achieve substantial clinical benefit

Can physical therapists improve psychological distress? Yes! The average patient sees a 50% reduction in psychological distress. **Baseline distress is primary predictor of clinical benefit**

Pain scores improve between 2 and 3 points, a clinically significant change

**50%**

**14-67%**

Reduction in utilization and willingness to pursue joint replacement<sup>1,2</sup>

# Myths and Truths

DJD Edition

# Myth #1

## Imaging is essential to diagnosis and appropriate treatment

# NICE

National Institute for  
Health and Care Excellence

### 1.1 Diagnosis

1.1.1 Diagnose osteoarthritis clinically without investigations if a person:  
is 45 or over **and**  
has activity-related joint pain **and**  
has either no morning joint-related stiffness or morning stiffness that lasts no longer than 30 minutes. **[2014]**

1.1.2 Be aware that atypical features, such as a history of trauma, prolonged morning joint-related stiffness, rapid worsening of symptoms or the presence of a hot swollen joint, may indicate alternative or additional diagnoses. Important differential diagnoses include gout, other inflammatory arthritides (for example, rheumatoid arthritis), septic arthritis and malignancy (bone pain). **[2014]**

# Myth #1

Imaging is essential to diagnosis and appropriate treatment

What about for suspected meniscus tears?

MRI increases the false positive rate and subsequently the risk of an unnecessary surgery

Mather et al, AJSM, 2014

***Truth: Imaging is not essential and enables a narrow view of the disease***

## **Myth #2**

**We know arthroscopy isn't effective for arthritis but does have an important role for meniscus tears**

## Myth #2

We know arthroscopy isn't effective for arthritis but does have an important role for meniscus tears

JAMA  
Network | **Open**<sup>™</sup>

Original Investigation | Orthopedics

### Effect of Physical Therapy vs Arthroscopic Partial Meniscectomy in People With Degenerative Meniscal Tears Five-Year Follow-up of the ESCAPE Randomized Clinical Trial

Julia C. A. Noorduyn, MSc; Victor A. van de Graaf, MD, PhD; Nienke W. Willigenburg, PhD; Gwendolyn G. M. Scholten-Peeters, PhD; Esther J. Kret, MSc; Rogier A. van Dijk, MD, PhD; Rachele Buchbinder, MD, PhD; Gillian A. Hawker, MD, PhD; Michel W. Coppieters, PhD; Rudolf W. Poolman, MD, PhD; for the ESCAPE Research Group

16 sessions of exercise-based PT non-inferior to arthroscopy

Comparable rates of radiographic OA progression

Arthritis & Rheumatology  
Vol. 72, No. 2, February 2020, pp 273-281  
DOI 10.1002/art.11082  
© 2019, American College of Rheumatology

AMERICAN COLLEGE  
of RHEUMATOLOGY  
*Empowering Rheumatology Professionals*

### Five-Year Outcome of Operative and Nonoperative Management of Meniscal Tear in Persons Older Than Forty-Five Years

Jeffrey N. Katz,<sup>1</sup> Swastina Shrestha,<sup>1</sup> Elena Losina,<sup>1</sup> Morgan H. Jones,<sup>2</sup> Robert G. Marx,<sup>3</sup> Lisa A. Mandl,<sup>3</sup> Bruce A. Levy,<sup>4</sup> Lindsey A. MacFarlane,<sup>1</sup> Kurt P. Spindler,<sup>2</sup> Genevieve S. Silva,<sup>1</sup> METEOR Investigators, and Jamie E. Collins<sup>1</sup>

12 wks of strengthening-based PT

HR for TKA 2.0 in the intention to treat analysis  
HR for 4.9 in the as-treated analysis

**Truth: Degenerative meniscus tears are degenerative joint disease and evidence-based treatments are generally the same**

## **Myth #3**

**Non-operative treatment is only effective for low severity DJD**

# Myth #3

## Non-operative treatment is only effective for low severity DJD

PROs for patients with different knee OA severities in the JHP

Whole person approach plus knee replacement produced clinically significant benefit in 90% of patients

**Truth: Whole-person, evidenced based approach to DJD care produces equivalent outcomes for all grades of radiographic OA**

# Summary

The evidence and barriers to delivery are best explained by a narrow, biomedical view of DJD

- Misconceptions
- Incomplete evaluation
- Negative language
- Imaging

Future developments should focus on treatments and delivery models consistent with the *biopsychosocial model*

- Combination treatments
- Increasingly precise and efficient messaging to inform and engage patients

Joint replacement

Corticosteroid Injections  
NSAIDS  
Physical Therapy  
Bracing (isolated cases)

Education  
Exercise  
Weight loss  
Assessment/Measurement
